**RE: Condition #7 of Exhibit 2- Standard Permit Conditions for Top of the World Wind Project**

Dear Dr. Schroeder,

Pursuant to Docket No. DEQ/ISC 09-03 and ISC order dated December 31, 2009, Condition #7 states the following:

The Permittee shall give written notice to the ISD when the physical components of each phase of the Project are 90% complete.

Duke Energy is pleased to report that Top of the World Wind Project is 90% complete with physical components as of September 3, 2010. Currently, the 66 GE 1.5MW turbines and 44 Siemens 2.3 MW turbines are in the commissioning phase, the balance of plant is complete and the substation, O&M building, transmission line and roads are in order and ready for service.

The remaining project construction activities include back feed power from PacifiCorp, final commissioning for the turbines, reclamation activities and construction demobilization.

Duke Energy would like to thank the Industrial Siting Division for its assistance in helping the project be constructed in compliance with the Wyoming Industrial Development Information and Siting Act statues and rules. We look forward to our continued work with you as we complete the construction phase and enter the operation phase for the Top of The World Wind Power Project.

Sincerely,

A handwritten signature in black ink, appearing to read 'D. Grogg', written over a light blue horizontal line.

David Grogg  
Construction Manager
