

PUBLIC NOTICE

The Storage Tank Program (STP) of the Wyoming Department of Environmental Quality (WDEQ) is proposing remedial actions for petroleum-impacted sites in Albany County, Wyoming. Previous WDEQ/STP investigations revealed ten petroleum-impacted sites in the project area. The WDEQ/STP is authorized to remediate these sites by Article 14 of the Wyoming Environmental Quality Act.

A Draft Final Albany County 2 Remedial Action Plan, describing the project and proposed actions, is available for review at the Albany County Library at 310 South 8th Street in Laramie, Wyoming, 82073. A copy is also available for review at the WDEQ office at 122 West 25th Street, Cheyenne, Wyoming, 82002. These copies will be available for public review through March 20, 2015.

The proposed remedial methods includes air sparging, soil vapor extraction and site-specific injection programs using proprietary injectants. These remedial methods will be utilized near the source areas and along the areas of contaminant migration. Construction activity is scheduled to commence in the summer of 2015. Operation of these methods will continue until remediation is complete. The remediation period is estimated to continue for one to ten years.

Funding for this project is from the Wyoming Corrective Action Account and federal funding. Questions and comments concerning this project should be directed to the WDEQ/STP Project Manager at the following address: Adrian Ducharme, WDEQ/STP, 122 West 25th Street, Cheyenne, WY 82002, phone (307) 777-7073.
