

## Watershed-Based Planning in Wyoming

**Last Updated:** 6/15/16

**Purpose:** The purpose of this document is to provide information about watershed-based planning in Wyoming to assist sponsors who are interested in submitting proposals for Section 319 funding. As outlined in the June 15<sup>th</sup>, 2016 Section 319 Memorandum issued as part of the FY17 Section 319 Request for Proposals, the majority of FY17 Section 319 funds will be allocated to projects that implement Watershed-Based Plans. Watershed-Based Plans are planning documents that address waterbodies whose designated uses are impaired due to nonpoint source pollution. This includes waterbodies listed in the 303(d) List (Category 5) and shown in Category 4A of Wyoming's [303\(d\)/305\(b\) Integrated Report \(2014\)](#). To qualify as a Watershed-Based Plan, a plan must include EPA's nine elements of watershed-based planning and the plan must have been approved by the Wyoming Department of Environmental Quality (WDEQ). EPA's nine-elements of watershed-based planning were published in the [Nonpoint Source Program and Grants Guidelines for States and Territories \(April 12, 2013\)](#). The nine key elements are also posted on the WDEQ [Nonpoint Source Program, "Grant Resources" Website](#). Table 1 of this document shows a list of Wyoming waterbodies impaired due to nonpoint source pollution and indicates if an approved or pending nine-element Watershed-Based Plan is available for that waterbody.

Please note that local watershed groups and Conservation Districts have written watershed plans for the majority of impaired waterbodies across the state. The WDEQ acknowledges and recognizes the work done to develop these plans, as well as the extensive work that has been done to implement many of those plans to improve water quality. However, because this document is intended to be a tool to assist with evaluating project eligibility for Section 319 funding, only Watershed-Based Plans that have been approved by WDEQ as meeting the nine-element requirement are noted in the following table.

Please use Table 1 to determine if a nine-element Watershed-Based Plan is available for the impaired waterbody that you wish to sponsor a project on. Information is provided at the end of this document about where you can locate copies of approved Watershed-Based Plans. For Watershed-Based Plans noted as "pending approval", please contact the WDEQ Nonpoint Source Program to determine project eligibility. Note that in the table below, approval of a Watershed-Based Plan for Section 319 purposes does not necessarily indicate that any corresponding TMDLs have been approved by EPA.

In limited circumstances, an alternative planning document to a watershed-based plan may be accepted to meet Section 319 project eligibility. Please contact the Nonpoint Source Program if you are interested in sponsoring a project that does not have a watershed-based plan, but either addresses an impaired waterbody or seeks to protect an unimpaired waterbody from degradation.

Please contact the Nonpoint Source Program if you have any questions about watershed-based planning or Section 319 project eligibility. Please direct questions to Jennifer Zygumt, Nonpoint Source Program Coordinator, 307-777-6080, [jennifer.zygumt@wyo.gov](mailto:jennifer.zygumt@wyo.gov)

**Table 1. List of Wyoming waterbodies impaired due to nonpoint source pollution and associated watershed-based planning activity**
