

**Wyoming Department of Environmental Quality  
Wyoming State Loan and Investment Board**

**Clean Water State Revolving Fund  
FY2021 Intended Use Plan**

**Introduction**

The 1987 Clean Water Act (CWA) amendments include requirements for each state to prepare an Intended Use Plan (IUP) for each capitalization grant application. The IUP describes how the State will use the Clean Water State Revolving Fund (CWSRF) to meet CWA objectives and further the protection of public health and the environment. The IUP contains the following elements:

1. Priority List of Projects and Criteria and Method for Distribution of Funds
2. CWSRF Financial Status
3. Additional Subsidization
4. Green Project Reserve
5. Short- and Long-term Goals of the Program
6. Information on the Activities to be Supported
7. Assurances and Specific Proposals

The Department of Environmental Quality (DEQ) and the Office of State Lands and Investments (OSLI) prepared the draft IUP and provided it to the public for review and comment. The CWSRF program held a public meeting on the draft IUP on April 16, 2020 in Cheyenne. Attachment VI summarizes comments and responses from the public meeting. Additionally, pursuant to State law, DEQ submitted the IUP to the Joint Minerals, Business and Economic Development Committee of the State Legislature for review. The Final IUP will be submitted to EPA Region VIII.

**Priority List of Projects and Criteria and Method for Distribution of Funds**

The State's FY2021 priority lists and project ranking systems are given in the following attachments:

- Attachment I - Ranking System for Wastewater Treatment System Projects
- Attachment II - Wastewater Treatment System Priority List
- Attachment III - Ranking System for Non-Point Source Projects
- Attachment IV - Non-Point Source Priority List
- Attachment V - Proposed Leaking Underground Storage Tank Non-Point Source Projects

The CWSRF program has identified projects most likely to apply for CWSRF funds during the upcoming year. Staff bases this projection on conversations and contacts made from potential

applicants. However, there is nothing implicit that these potential applications have a preferential status to receive funding. Actual funding decisions will be made by the State Loan and Investment Board (SLIB) based on actual applications received and criteria determined by SLIB. The CWSRF program has also made conditional awards to three projects. These projects with conditional awards still need to complete the remaining steps for CWSRF funding, either during the remainder of FY2020 or during FY2021. Projects with conditional awards do have preferential status to receive funding.

Attachments II (wastewater treatment system projects) and IV (non-point source projects) identify the projects most likely to apply for CWSRF funds in FY2020 or that are expected to complete the remaining steps on conditional funding awards by the end of FY2020 or in FY2021. Their total estimated cost is \$93,990,000. Attachment II also identifies the projects expected to apply for funding during the FY2022-FY2025 timeframe. Their total estimated cost is \$314,040,000. Attachment V lists projects proposed for non-point source remediation/corrective actions at leaking underground storage tank (LUST) sites for FY2021. Their total estimated cost is \$8,332,695, although the expected new LUST program loan amount for FY2021 is expected to be approximately \$8,000,000. The CWSRF program also expects that additional loans of approximately \$8,000,000 each will be requested for additional LUST projects in each of fiscal years FY2022-FY2025. The CWSRF program believes these are the projects (indicated on Attachments II, IV, and V) that will most likely pursue funding; however, other projects from the priority lists may proceed before envisioned. All projects on the priority lists are eligible to receive CWSRF loans. The State intends to fund projects at LUST sites with first round funds (i.e., these will be "equivalency" projects) and all other projects with second round funds.

**Project funding decisions and bypass procedures:**

Historically, the State has been able to fund all projects which actually do apply for loan funding, and it expects to be able to continue to do so during FY2021, though not all applicants will be likely to receive the full amount of principal forgiveness for which they apply. If and when the loan application amounts exceed the amount available for loans, the State will fund projects in order of priority of those that apply that are ready to proceed promptly with construction (or with design work for a design only loan). An exception may apply to projects eligible for the Green Project Reserve (GPR); these projects, in priority order, may bypass higher ranked projects if needed to achieve the minimum GPR funding requirement. Only projects on the priority lists will be considered eligible for funding, except in the case of emergencies as described below.

**Emergency bypass procedures:**

If SLIB determines that immediate attention is required to protect public health, a project may be funded with CWSRF funds; however, the IUP must first be amended to include the project. Any eligible costs would be reimbursable after the project meets CWSRF program requirements.

(Rest of page intentionally left blank)

## CWSRF Financial Status

The following table summarizes the CWSRF financial status as of 3/1/2020.

**Table 1. CWSRF financial status as of 4/1/19**

	Federal Grant	State Match (20%)	Total
Capitalization grants FY1991 through FY2009	\$135,830,917	\$27,166,183	\$162,997,100
ARRA 2009 grant (state match not required)	\$19,239,100	\$0	\$19,239,100
Capitalization grants FY2010 through FY2017	\$57,321,000	\$11,464,200	\$68,785,200
Capitalization grant FY2018	\$7,859,000	\$1,571,800	\$9,430,800
Capitalization grant FY2019	\$7,779,000	\$1,555,800	\$9,334,800
Capitalization grant FY2020 (estimated)	\$7,779,000	\$1,555,800	\$9,334,800
Total Federal & State funds deposited into CWSRF Accounts (estimated)	\$235,808,017	\$43,313,783	\$279,121,800
Less Administration Set-Aside (4.0% of federal grants, except ARRA, estimated)			\$-8,350,655
Plus Total Loan Principal Repayments received*			\$218,629,125
Plus Total Loan Interest Payments received			\$46,517,661
Plus Investment Income earned			\$60,627,558
Less Loans awarded			-\$511,112,847
Equals Total Estimated Fund Balance Available for Capital Construction Funding with estimated FY2020 capitalization grant.			\$142,291,383

\* As of 3/18/2020, forty-nine (46) loans have been repaid in full for \$151,158,942.38. Fourteen (14) loans have had the principal forgiven. Seventy-five (75) loans are in repayment status. Eight (8) loans have been cancelled. Twenty-eight (28) loans are in disbursement status. A total of one hundred eighty-one (181) loans have been awarded since inception, including twenty-six (26) fully or partially funded ARRA projects.

(Rest of page intentionally left blank)

## Additional Subsidization

Starting with the FY2010 federal capitalization grant, the State must use certain amounts of each capitalization grant to provide additional subsidization to eligible recipients. The State provides additional subsidization in the form of loans in which a portion of the principal will be forgiven upon project completion. SLIB determines the amount of principal forgiveness awarded to individual projects based on criteria set forth in SLIB Rules and Regulations Chapter 11 and on the actual applications received. The rules base eligibility for principal forgiveness primarily on affordability criteria that are based on income data, unemployment data, and population trends, as mandated by the 2014 CWA amendments. The rules also allow eligibility based only on income criteria in cases where principal forgiveness does not need to be linked to affordability criteria. The rules specify a maximum percentage of principal forgiveness for applicants based on the given criteria. Table 2 shows the status of the additional subsidization requirement.

**Table 2. Additional Subsidization Requirement Status as of 5/1/18**

Federal Grant Year	Federal Grant Amount	Min. Required Add. Sub.	Max. Allowable Add. Sub.
FY2010	\$10,002,000	\$1,497,982	\$4,993,274
FY2011	\$7,222,000	\$669,233	\$2,230,777
FY2012	\$6,908,000	\$383,922	\$575,882
FY2013	\$6,520,000	\$307,120	\$460,680
FY2014	\$6,853,000	\$372,924	\$559,386
FY2015	\$6,817,000	\$0	\$2,045,100
FY2016	\$6,525,000	\$652,500	\$2,610,000
FY2017	\$6,474,000	\$647,400	\$2,589,600
FY2018	\$7,859,000	\$785,900	\$2,357,700
FY 2019	\$7,779,000	\$777,900	\$2,333,700
FY 2020	\$7,780,000	\$778,000	\$2,334,000
FY 2021 (estimate)	\$7,780,000	\$778,000	\$2,334,000
Totals		\$7,650,881	\$25,424,099
Additional subsidization under binding commitment			\$19,454,369
Additional subsidization conditionally awarded, binding commitment pending			\$1,178,413
Minimum additional subsidization still required			\$0
Maximum additional subsidization still available			\$1,519

(Rest of page intentionally left blank)

## Green Project Reserve

Starting with the FY2010 capitalization grant, to the extent there are sufficient eligible project applications, the State must use certain minimum amounts of the capitalization grants to fund projects which address green infrastructure, water or energy efficiency improvements, or other environmentally innovative activities (collectively referred to as "green" projects). This requirement is referred to as the Green Project Reserve, or GPR. Table 3 shows the status of the GPR. The priority lists (Attachments II and IV) show that sufficient green projects are anticipated to apply for funding or to complete remaining steps on conditional funding awards to meet the minimum required GPR amount. Other projects on the priority lists may be able to show, through a business case or other information, that they also are green projects; these projects too will be considered eligible for award under the GPR. GPR loans will have an interest rate of 0% and will be eligible for principal forgiveness under the criteria established in SLIB rules.

**Table 3. Green Project Reserve Status as of 3/31/2020**

Federal Grant Year	Federal Grant Amount	Minimum GPR %	Minimum GPR
FY2010	\$10,002,000	20%	\$2,000,400
FY2011	\$7,222,000	20%	\$1,444,400
FY2012	\$6,908,000	10%	\$690,800
FY2013	\$6,520,000	10%	\$652,000
FY2014	\$6,853,000	10%	\$685,300
FY2015	\$6,817,000	10%	\$681,700
FY2016	\$6,525,000	10%	\$652,500
FY2017	\$6,474,000	10%	\$647,400
FY2018	\$7,859,000	10%	\$785,900
FY 2019	\$7,779,000	10%	\$777,900
FY 2020	\$7,780,000	10%	\$778,000
FY 2021 (estimated)	\$7,780,000	10%	\$778,000
Total			\$10,574,300
GPR amount under binding commitment			\$9,239,444
GPR amount conditionally awarded, binding commitment pending			\$3,000,000
Minimum GPR amount still required			\$777,900

## Short-term Goals

1. Continue to improve the water quality of the State's waters (surface and groundwater), meet the wastewater treatment needs of the State, and eliminate any public health hazards related to the discharge of inadequately treated wastewater.
  
2. Provide low interest (2.5% or 0% depending on type of project) financing (up to 100% loans for eligible project costs) on municipal wastewater facilities and systems, eligible Section 319 projects, and other eligible projects.
  
3. Ensure the technical integrity of Clean Water State Revolving Fund projects through the review of planning, design drawings and specifications, and construction activities.

4. Ensure compliance with all pertinent Federal, State, and local water pollution control laws and regulations.
5. Obtain maximum capitalization of the fund for the State in the shortest time possible.

### **Long-term Goals**

1. Maintain, restore, and enhance the State's water quality to protect public health and the environment.
2. Maintain a permanent, self-sustaining State Revolving Fund program that will serve in perpetuity.
3. Fulfill the requirements of pertinent federal, state and local laws and regulations governing water pollution control activities, while providing the State and local project sponsors with maximum flexibility and decision making authority regarding such activities.

### **Information on the Activities to be Supported**

SLIB is the grant recipient for the federal capitalization grant. The revolving loan account receives the federal capitalization grant and the 20% State match generated from the underground storage tank Corrective Action Account. This account receives money from the oil and gas severance tax equal to one cent per gallon on gas and special fuels sold or distributed in the State.

The primary types of assistance are loans for underground storage tank remedial actions and for wastewater system improvements. The CWSRF makes loans to the DEQ for use in making payments to contractors for site investigations and corrective action contamination cleanup work at underground storage tank sites. These loans are made at a 0% interest rate for a 20-year repayment period. The CWSRF also makes loans to eligible applicants (counties, municipalities, joint powers boards, state agencies, and other political subdivisions) to finance wastewater and non-point source projects. For most of these loans, the terms will be 2.5% interest rate for up to a 30-year repayment period, but for loans under the GPR, the terms will be 0% interest rate for up to a 30-year repayment period. In addition, each applicant will pay a 0.5% origination fee upon completion of loan documents.

#### **Program Administrative Funds from CWSRF Federal Capitalization Grants:**

The State plans on applying for an amount equal to 4% of the FY2020 federal grant for administrative expenses, as authorized in the CWA. The State continues to bank 4% (\$769,564) of the ARRA 2009 federal grant, to be drawn from a future federal grant, for administrative expenses. These funds will be used to pay reasonable administrative costs of the CWSRF program not to exceed 4% of all CWSRF federal grants (cumulative) awarded to the fund. This covers program development, review of treatment system facilities plans, review of construction and bid documents, assistance and oversight during planning, design and construction, loan origination work, administering repayments, costs associated with the public comment process, staff salaries, and associated costs to administer the program.

All awarded program administrative funds not drawn in the current year will be available to be drawn from future federal grants, up to the 4% maximum allowed. The actual program administrative funds expended and carried forward from the federal grant will be accounted for and reported in the CWSRF Annual Report and will be part of EPA's annual program oversight review.

The CWSRF program will use first in, first out (FIFO) accounting, per EPA directions, on all CWSRF federal grant cash draws for expediting federal grant close-outs.

**Cash Draw Ratio:**

In FY2021, the CWSRF program will use a cash draw ratio of 83.3% federal funds and 16.7% state match funds.

**Data Entry:**

The State will perform monthly updates to the CW Benefits Reporting (CBR) database. In addition, the State will perform monthly updates to the Federal Funding Accountability and Transparency Act Subaward Reporting System (FSRS) to meet the Federal Funding Accountability and Transparency Act as required in the grant conditions of awarded grants.

**Procurement of Architectural and Engineering Services:**

All leaking underground storage tank (LUST) remediation activities funded by CWSRF are designated as using the CWSRF first round funds; i.e., they are "equivalency" projects. Accordingly, all new solicitations, significant contractual amendments, and contract renewals for architectural and engineering services that are initiated on or after October 1, 2014, and that use CWSRF equivalency monies from the FY2015 capitalization grant or later, need to be negotiated in the same manner as a contract for architectural and engineering services is negotiated under the Title 40 USC Chapter 11. Since implementation of State practices for architectural and engineering services on LUST projects may not comply with requirements under Title 40 USC Chapter 11, LUST program use of loans using FY2015 or later equivalency funds will be limited to non-engineering costs (such as construction work that is put out for bid, utility payments, and laboratory contracts) and to engineering contract amendments that are considered to not be significant. Such contract amendments will be for engineering contracts initially awarded before October 1, 2014. These amendments will be only those determined to not be significant amendments using best professional judgment analyzing the increases to both scope and cost of work as allowed by EPA interpretive guidance. LUST projects are the only projects needed to meet this and other "equivalency" requirements in CWSRF.

**Assurances and Specific Proposals**

The State has assured compliance with the following sections of the law in the State/EPA Capitalization Grant Operating Agreement. In addition, the State has developed specific proposals on implementation of those assurances in the attachments to the Operating Agreement developed by the SLIB and DEQ.

Environmental Reviews - The State of Wyoming certifies that it will conduct environmental reviews of each Section 212 project receiving assistance from the Clean Water State Revolving Fund. Wyoming will utilize procedures equivalent to National Environmental Policy Act procedures in conjunction with such environmental reviews.

Section 602(b) (3) - Binding Commitments - The State of Wyoming certifies that it will enter into binding commitments equal to at least 120% of each quarterly payment within one year after receipt.

Section 602(b) (4) - Timely Expenditures - The State of Wyoming certifies that it will expend all funds in the Clean Water State Revolving Fund in an expeditious and timely manner.

Section 602(b) (5) - First Use Enforceable Requirements - The State of Wyoming certifies that all major and minor wastewater treatment plants (WWTPs) that the State has previously identified as part of the National Municipal Policy Universe are:

1. In compliance, or
2. On an enforceable schedule, or
3. Have an enforcement action filed, or
4. Have a funding commitment from the Clean Water State Revolving Fund loan program or state grant/loan programs funded by government mineral royalty impact fees.

Section 602(b) (6) - Title II Requirements - The State of Wyoming certifies that it will ensure that sufficient financial assistance is provided from the fund to treatment works projects with eligible construction costs to satisfy the appropriate Title II equivalency requirements specified in Section 602(b) (6) in an amount equal to the funds directly made available by the federal capitalization grant, as necessary under any future amendments to the Clean Water Act or federal appropriation legislation.

**ATTACHMENT I**  
**RANKING SYSTEM FOR WASTEWATER TREATMENT SYSTEM PROJECTS**

A. Severity of pollution problem (100 points maximum - select only 1 category)

1.	Health Hazard - project required to remedy present situation where there is significant probability of human contact with raw or partially treated sewage	100
2.	Project providing treatment facility for community with an existing raw discharge	80
3.	Designated Water Quality Standards - project required to correct present violations of Wyoming Stream Standards, other than fecal coliform	60
4.	Effluent Standards - project required to correct present violations of discharge permit requirements or secondary requirements other than fecal coliform	50
5.	Effluent Standards - project required to correct periodic violations of discharge permit requirements or secondary requirements other than fecal coliform	40
6.	New collection and treatment system for area presently serviced by on site treatment system, where present system is inadequate	30
7.	Disinfection - project required in order to provide disinfection for situations other than where health hazard is identified as in A(1)	20
8.	Sewer Rehabilitation and/or infiltration/inflow correction -project required to insure integrity of sewer collection system or correct infiltration/inflow problem	20

B. Population Served

Population will be utilized in cases of ties in priority points, in which case the discharge serving the lower population will receive priority.

C. Possible Impairment of Classified Water Uses.

If impairment of classified water use applies, select a maximum of one category. The assigned value shall be the sum of the listed points and an incremental 20 points if a restoration of beneficial use is documented as probable by waste load allocation calculations. This is to be based on effects of proposed plant construction. Total maximum value from this section is 90 points.

- |    |  |    |
|----|--|----|
| 1. | Discharge impairs surface water being maintained at the existing quality and no further degradation by discharges will be allowed (Class 1)  | 70 |
| 2. | Discharge impairs surface water being protected as a public water supply intake, or if applicable, impairs groundwater of quality meeting or exceeding domestic use Class I groundwater  | 60 |
| 3. | Discharge impairs surface water being protected as suitable for full body contact recreation   | 50 |
| 4. | Discharge impairs surface water being protected as presently supporting game fish or has the hydrologic and natural water quality potential to support game fish (Class 2B), or if applicable, impairs groundwater designated use "Fish/Aquatic Life Concentration", Class Special A | 40 |
| 5. | Discharge impairs surface water being protected as presently supporting non-game fish or has the hydrologic and natural water quality potential to support non-game fish (Class 2C)  | 30 |
| 6. | Discharge impairs water being protected as a Class 3 or 4 surface water or if applicable, impairs groundwater designated suitable for agricultural (Class II) or livestock (Class III)   | 20 |

D. Factor for the dilution capacity of the stream. This factor is based on the ratio between the seven day - ten year low flow and the volume of the discharge to Class 1 and 2 streams. This factor shall not be applied for projects consisting solely of a collection system.

Ratio	Points
1.0 or less	50
1.1 to 1.4	45
1.5 to 1.9	40
2.0 to 2.9	35
3.0 to 3.9	30
4.0 to 5.9	25
6.0 to 14.9	20
15.0 to 24.9	15
25.0 to 69.9	10
70.0 to 999.9	5
1,000 or greater	0
No dischg	0

- E. Factor for the quality of the effluent discharged. This factor is based upon the ratio between the average BOD concentration in the effluent discharged from a satisfactorily operated treatment facility and the permit limitations or the secondary standard, whichever is greater. This factor shall not be applied for projects consisting solely of a collection system.

Ratio	Points
10 or greater	50
9 to 9.9	45
8 to 8.9	40
7 to 7.9	35
6 to 6.9	30
5 to 5.9	25
4 to 4.9	0
3 to 3.9	15
2 to 2.9	10
1 to 1.9	5
Less than 1.0	0

- F. Factor for the quality of the effluent discharged. This factor is based upon the ratio between the average concentration of ammonia as N discharged to the receiving streams and the amount listed in the NPDES permit. A value will be designated only if a limit is assigned in a NPDES permit.

Ratio	Points
2.5 or greater	50
2.25 to 2.5	40
2.0 to 2.25	30
1.0 to 2.0	20

RANKING SYSTEM FOR NON-POINT SOURCE PROJECTS**

- A. Does the proposed project address a traditional water quality need? Traditional water quality projects or activities are those whose primary benefit or purpose is water quality. Non-traditional projects or activities are those whose primary benefit or purpose is other than water quality. 10 points awarded for traditional water quality projects.
- B Location of project.
- |    |  |           |
|----|--|-----------|
| 1. | Impaired water body or aquifer as defined by 303d list | 10 points |
| 2. | Threatened water body or aquifer.                      | 5 points  |
| 3. | No identified water quality problem.                   | 0 points  |
- C. Is there an imminent risk to public health or the environment? 10 points
- D. Is the project the most efficient and effective method of achieving the State's water quality goals? 5 points
- E. Are the appropriate entities involved in a comprehensive, integrated fashion? 5 points
- F. Does the project provide the technical and administrative capability to manage the loan and project? 5 points
- G. Does the project provide a monitoring plan to measure water quality impacts? 5 points
- H. Does the project have a maintenance plan agreement for continued operation of the project or activities?
- |    |  |          |
|----|--|----------|
| 1. | 10 years or greater                        | 5 points |
| 2. | 5 years or greater but less than 10 years. | 3 points |
| 3. | less than 5 years.                         | 1 point  |

## **Attachment VI: Summary of Comments and Responses from Public Meeting**

Public Meeting held April 23, 2020 at the Wyoming Dept. of Environmental Quality (200 West 17<sup>th</sup> St., Cheyenne, conference room 211), advertised

Public Meeting was held April 23, 2020 as advertised March 22 in the Wyoming Star-Tribune and on the DEQ and OSLI websites at the DEQ office (200 W. 17<sup>th</sup> St. 2<sup>nd</sup> floor), and by Google hangouts/call-in.

No comments or amendments were received during the comment period except a correction to project amounts for the Town of Lyman and the Bridger Valley JPB projects.

Participants at the public meeting: William Tillman, Stan Miller (DEQ Water Quality, SRF program), Shawn King (Office of State Lands, SRF program), Floren Poliseo, Town of Jackson Director of Public Works (by phone)

Discussion: There were no specific comments or changes suggested to the Intended Use Plan documents. A few general items were discussed, such as the addition of several irrigation districts to the Clean Water listing. Also, it was pointed out that the financing options may be in a state of flux, depending on the availability of grants and infrastructure stimulus funding due to the pandemic.

Ms. Poliseo, on behalf of the Town of Jackson, asked whether stormwater infrastructure is eligible for funding, and was assured that it could go through on the Clean Water side. Such projects for the Town of Jackson may be placed on the next Intended Use Plan in February 2021 (2022 IUP).
